

Flood Risk Assessment Expertise

Our data

Address based data accuracy is the cornerstone of our business, which is powered by the largest library of environmental risk data in the UK.

Our flood risk data is provided by commercial partners and regulatory bodies, including JBA Risk Management Ltd, GeoSmart Information Ltd and the Environment Agency. This data is validated and updated by our team of over 20 experts.

We have unique experience of large scale data-led projects in this sector, with part of our business (Landmark Solutions) responsible for administering the Flood Re scheme, alongside Capita.

Risk Assessment

We produce over 58,000 flood risk screening reports per month to the conveyancing market to support property transactions.

A proportion of these transactions feature redevelopment proposals where Flood Risk Assessments are required. We have extensive experience of advising clients in these situations, to ensure their development plans are achievable with the approval of the regulatory authorities.

Many of our flood risk screening reports are manually assessed by our consultancy team, Argyll Environmental. This experience allows us to understand and effectively analyse how different flood risks interact and are represented, to present an overall profile of flood risk at any given location.

Consultants

Landmark Information has its own in-house consultancy team, Argyll Environmental.

Our team has 22 experienced consultants accredited by various bodies including the Institute of Environmental Management and Assessment and The Geological Society. The team has over 100 years collective experience of providing flood risk solutions, during which time we have developed acute knowledge of the approach of regulatory authorities to flood risk assessment. This allows us to advise clients on redevelopment proposals in a focused and pragmatic way.

Our expertise is renowned, and we provide education services such as the Landmark Academy. This is a learning and development platform advising on, amongst other things, flood risk management.
